

## THE CHEF'S KITCHEN

The man of the house is an avid chef, so ample storage, high-end appliances, and plenty of counter space were imperative. A double island layout takes center stage, with the first island acting as a working hub equipped with a sink and housed storage. The second island, which faces the open living area, was designed to mimic the concept of a chef's table—an age-old tradition once reserved for VIP rooms at premier restaurants. This island allows for seating on both sides and acts as a dynamic space where friends can engage with the family chef without disrupting the cooking process.
